

NURSEMATE ASAP with Immu-PRIME®

Concentrated Bioactives For Newborn Calves

NURSEMATE ASAP has been giving newborn calves a head start and a solid blue print for success for more than 30 years.

When a calf is born, time is critical. Newborn calves need to get on their feet and get colostrum into their immature immune systems within the first few hours of life if they're going to obtain the passive immunity they need. Whether nursing its mother or hand-fed in a calf hutch, every newborn calf needs NURSEMATE ASAP.

NURSEMATE ASAP is Effective

NURSEMATE ASAP is made from concentrated colostrum. The immune proteins and other natural defenses against bacteria, viruses and enteric parasites found in colostrum begin protecting the newborn as soon as it hits the ground, before nursing or being fed colostrum. NURSEMATE ASAP gets the newborn up and nursing faster, giving its immune system the head start it needs.

NURSEMATE ASAP is Convenient and Easy to Use

NURSEMATE ASAP comes in an easy to use 30ml tube. NURSEMATE ASAP's concentrated formula and 30ml dosage gets newborn calves started, but does not fill them up so they are hungry for their first feeding of colostrum.

No pails, no mixing and no feeding tubes. Simply place the tip of the dosing syringe on the back of the calf's tongue and push the plunger slowly.

NURSEMATE ASAP is Economical

More convenient, easier to use and more cost effective make NURSEMATE ASAP the first choice for farmers and ranchers who want to give their newborn calves a head start and a blue print for success for a productive future.
